

TWO YEARS OF SOFTWARE DEVELOPMENT STOLEN

'HighSpeed Corp' have suffered yet another embarrassing security breach, today revealing that a massive quantity of private data was stolen from their central mainframe. This system has been targeted repeatedly in recent times.

'HighSpeed Corp' had been working on several advanced software products and this computer system was their primary file server. Most of their proprietary source code has been copied – over 631 Gigaquads of data, immediately compromising several of their planned security systems. Federal Agents have been called in to help track down the Corporation and the hacker responsible.

Major corporation suffers complete data loss

'HighSpeed Corp' are today boosting their security systems as their file servers suffered yet another complete failure. The company has come under attack on several occasions in the last month by hackers who have yet to be identified.

The company found that masses of corporate data has been destroyed. It is not known how much this will cost the company but there is little doubt that serious damage has been done. This level of data loss could not occur without serious repercussions.

Gigaquads of scientific data copied by hacker

'HighSpeed Corp' are once again reviewing their security procedures after revealing that their central mainframe has been compromised for the third time in a month, with massive amounts of confidential data being transferred away.

The stolen files contained data from a massive scientific research program, which 'HighSpeed Corp' had been working on for the past 3 years. Around 631 Gigaquads of data was copied before the intruder disconnected. 'HighSpeed Corp' will undoubtedly try to discover the corporation behind this theft.
